

Global Open Advanced Learning

Introduction

We have several dimensions and perceptions to education today. Well educated citizens of a country are the wise people who live and let others live comfortably, while working on a righteous path through their lives. Good education allows us to enlighten ourselves and those around us, with knowledge and wisdom sought from our ancestors, and with prevailing facts and figures around the world. Through learning, one can work towards a better world of today and tomorrow by applying thoughts into effective actions.

GOAL is an initiative and effort to bring about awareness and learning among the masses on several areas of education. We must not forget that all the knowledge is created by us, **human beings**. Our continuing evolution allows us to grasp as much knowledge as possible.

We believe that wisdom is the purest form of knowledge. Knowledge is ever evolving and has come from a distant past where none of us would have existed. Hence our education system is based on knowing the “self” first and then taking a direction for one’s living.

Learning Innovated

Global Open Advanced Learning is an approach to know and understand education with a purpose of enlightening ourselves, and feel the significance for a better evolving world.

During the course of our school, we go through classes 1 to 12, and learn from reading and writing alphabet and numbers, to taking up a specialized stream like Science, Commerce, Arts, and others. We have researched the education system to bring forth a flexible approach towards learning and improvising upon the chosen area of specialty.

GOAL is committed to understanding the young minds and look through the life from their perspective. Some of our brochures are dedicated to educational courses, roadmaps, services like e-Library and these may be read to understand our approach towards education.

GOAL

Develop Inventive and Innovative Thinking. Learn from the experienced, and get ready for achieving what you aspire for!

Products and Services

- Educational courses
- Made for Undergraduates and Graduates

- Onsite and in-house training delivery
- Corporate trainings available
- Virtual trainings on specific topics
- Online access to the e-Library available 24x7

VirtOrg Consulting & GOAL Education are a part of Sky & Earth Technologies (Regd.)

About Us

Why Education and Learning

Let us look at the growing up of a child in to an adult human being. One may study in one or several schools and grasp vastly from the environment, including family members, friends, and social places like markets, malls, sports clubs etc. Every one of us is different in nature and outlook. However, with civilizations flourishing around countries of the world, we are today known to be a part of the global village. All the countries depend on one another in this global village.

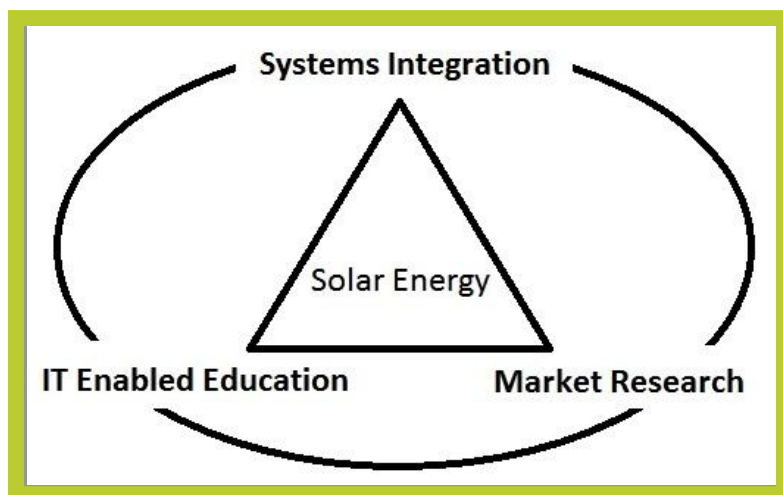

We understand that the school education system across the globe prepares a child through about 12 years of school teaching. Our education starts when the child steps out of the school and starts attaining adulthood, attends a college or diploma, or takes up any specialized branch to study further. Our IT-enabled approach to education vows to prepare you effectively to bring about a change in your personality for the corporate world. Our offerings also include corporate trainings from several industry majors, and customized trainings based on your requirements. Currently we serve a wide variety of Information Technology courses, and will subsequently add specialized courses in cross-functional areas from non-IT sector.

To the reader

Sky & Earth Technologies is a registered firm based in Gurgaon, India and is pleased to introduce itself as an organization working towards solar energy solutions, with single motto of saving our planet. Our dream is to have clean and green energy awareness across India and the globe, and to harness solar energy in as many spheres as possible.

With its left arm, **VirtOrg Consulting** established in 2010 is a provider of IT services and solutions with an active online presence. VirtOrg's focus is on IT-Enabled systems integration and acts as a catalyst for our IT-Enabled education.

Our right hand is **GOAL Education. Global Open Advanced Learning**, an education initiative to promote cost effective learning for undergraduate and graduate students who are looking for meaningful employment and promising careers in the industry.

Our triangular approach encompassing Systems Integration, IT Enabled Education, and Market Research, with Solar Energy being the focal point.
